

Accellion Company Overview

KITWORKS CONTENT FIREWALL

Accellion is the provider of the industry's first enterprise content firewall. Organizations now rely on Accellion to prevent data breaches and compliance violations from third party cyber risk. CIOs and CISOs rely on the Accellion platform for complete visibility, security and control over the communication of IP, PII, PHI, and other sensitive content across email, file sharing, mobile, enterprise apps, web portals, SFTP, and automated inter-business workflows.

By consolidating security across third party communication channels, the Accellion Kiteworks content firewall simplifies complex infrastructure and reduces costs, while improving the user experience. When employees click the Accellion button, they know it's the safe, secure way to share sensitive information with the outside world.

Accellion was founded in 1999 and focused shortly thereafter on file transfer technology. Global businesses relied on Accellion to share large files like CAD designs, X-rays, and videos outside of their organizations. Enterprise employees could access and share these files from any connected repository, from any location, using any device.

Organizations in highly regulated industries like healthcare, government, law, and financial services began to view Accellion as critical to ensuring files are shared securely and in compliance with rigorous data privacy standards regulations.

Accellion was – and remains – singularly qualified to control, protect, and trace all file activity, who sent what to whom and when.

CORPORATE HIGHLIGHTS

3,000 Global Customers;
25 million end-users

Key Verticals:

- **Financial Services**
- **Government**
- **Healthcare**
- **Legal**
