Kiteworks

SOLUTION BRIEF

FOR COMPLIANCE, PRIVACY, AND SECURITY TEAMS

Your Trusted Advisor in Kiteworks: Streamline the Work, Reduce the Risk

KAI is the AI agent built into Kiteworks. Ask it about your audit log, files, folders, and people, and it helps you understand what is going on and decide what to do about it. It reads, explains, and recommends inside your own permissions, and every change stays a decision you make yourself.

Ask. Verify. Act.

Your Model, Your Account

The Challenge

Compliance and security teams answer the same questions again and again: who accessed what, which policy fired, who shared this externally. Each answer takes manual reports and analyst time, while Gartner projects 40% of enterprise apps will include task-specific AI agents by the end of 2026.

The Solution

KAI is built for the people who govern the data. Ask in plain language, see every lookup KAI made, and have it draft a Data Policy for a person to apply. It runs on your own LLM model through your own AWS Bedrock account, with no new permission model.

Ask. Verify. Act.

1 ASK

Ask in Plain Language

Use the “Ask KAI anything” box in the Governance Center. Try asking which Data Policies fired for a user, or who downloaded the most files last week.

2 VERIFY

See Every Lookup

Open “Show work” to review each lookup KAI made against your own activity and audit log. Verify the answer instead of trusting it.

3 ACT

Apply the Policy Yourself

Ask KAI to draft a policy that blocks external sharing of CUI. KAI has no write tools: A person reviews, saves, and activates the policy.

Ask KAI Anything About Your Data

Interrogate the Audit Log

Ask a complex question about activity and get counts, breakdowns, and the specific events behind them. KAI groups the full set of matching events for you, not just one page of results, so the answer arrives already counted.

Answer Questions About Files, Folders, and People

Who owns this file. Who can reach it. How much storage this user or the whole system is consuming. One question instead of four screens, and read-only throughout: these tools cannot create, modify, or delete a file, a folder, or a user record.

An AI Agent Your Security Team Can Approve

Your Model, Your Account

Runs on LLM through your AWS Bedrock account. You hold the credentials and pay AWS directly.

History on Your Appliance

Conversation history stays on your Kiteworks appliance.

Signed-In Admin Permissions

KAI works through Kiteworks APIs as the signed-in admin.

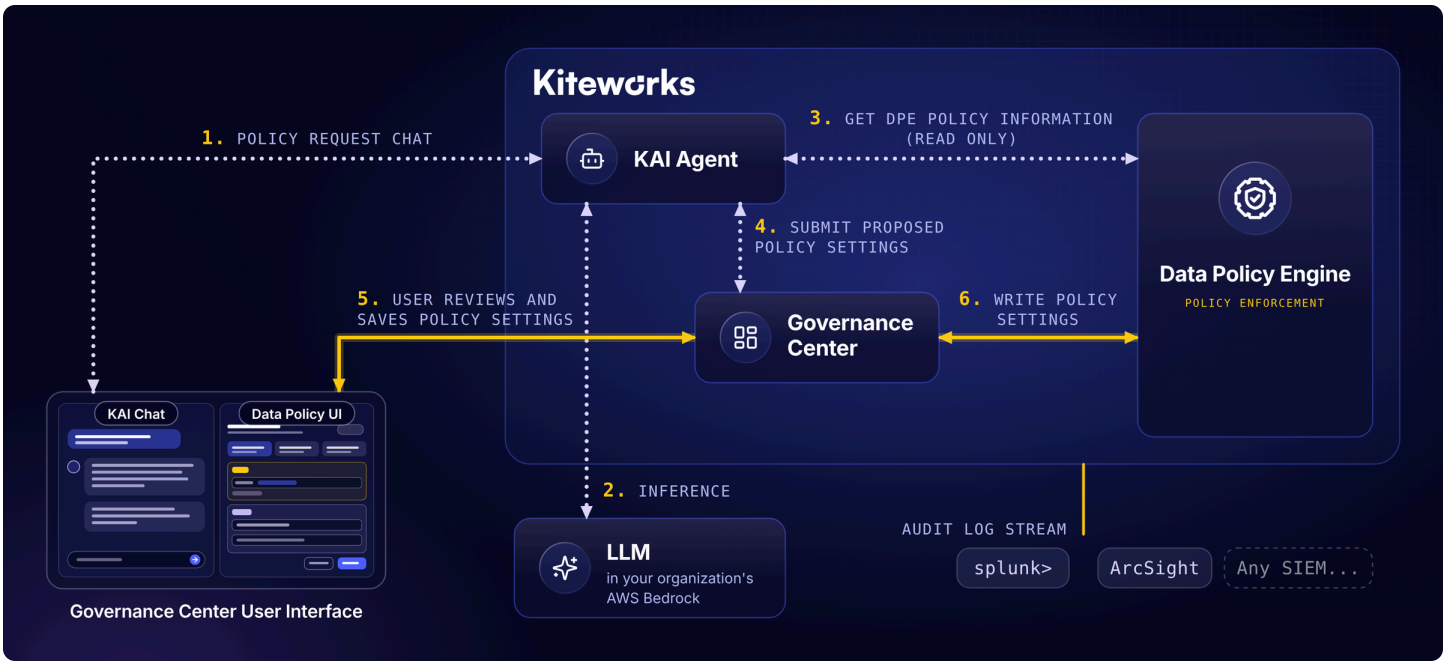

One Governed Data Layer for Your Agents and Ours

KAI for Governance
The AI agent built into Kiteworks answers audit and risk questions for admins and compliance teams from day one.

Kiteworks MCP Server for Your Agents
Connect your own AI agents to Kiteworks data. Admins choose the API scopes, and the move and delete scopes stay off unless enabled.

One Permission Model, One Audit Log
Whichever agent is acting, it passes through the same Kiteworks permissions and is recorded in the same audit log.

How KAI Drafts a Policy, Reviewed by a Person

Join Innovators in AI: KAI and MCP Server Free for 6 Months

Customers who join the Innovators in AI program use KAI and the Kiteworks MCP Server free for 6 months. Join through the Innovators in AI intake form (developer.kiteworks.com/mcp-innovators-ai.html) or the KAI early access form.

Kiteworks MCP Server is generally available and KAI is in beta.

Kiteworks

Kiteworks' mission is to empower organizations to effectively manage risk in every send, share, receive, and use of private data. The Kiteworks platform provides customers with a secure data exchange that delivers data governance, compliance, and protection in a unified control plane. Kiteworks unifies, tracks, controls, and secures sensitive data moving within, into, and out of their organization, significantly improving risk management and ensuring regulatory compliance on all private data exchanges. Headquartered in Silicon Valley, Kiteworks protects over 100 million end-users and thousands of global enterprises and government agencies.
