

# Proofpoint & Kiteworks

## Better Together

Complement Proofpoint’s powerful email hygiene and threat protection with Kiteworks’ comprehensive email encryption, compliance tracking and controls, and seamless usability.

Capability	Proofpoint Email Protection	Kiteworks Email Protection Gateway
<b>Email threat protection</b> – Defend your organization from phishing attacks, imposter email, malware, and business email compromise (BEC).	✓	
<b>Email hygiene</b> – Eliminate SPAM from users’ inboxes.	✓	
<b>Automated email encryption policies</b> – Give the encrypt-or-not decision for each email to automated policies, not users or plugins. Supports Microsoft AIM classification metadata.		✓
<b>Email encryption standards</b> – Support S/MIME, OpenPGP, TLS, and Push HTML. Works with any standard email client and service without the need for plugins.		✓
<b>Automated certificate and key management</b> – Free up IT resources and make encryption seamless for end-users.		✓
<b>End-to-end encryption option</b> – Administrators, vendors, and governments cannot access emails in servers and in transit because they are encrypted in the sender’s client and decrypted only in the recipient’s client.		✓
<b>Unified third-party communications</b> – Lay the groundwork to manage a single set of controls, policies, user roles, and indicators across all sensitive email and file sharing. Extend it to transfers via web forms, SFTP, MFT, and API integrations.		✓
